Creating a new custom field

Extension Settings

Requirements

LG File Manager is an [ExpressionEngine extension](#) and has been tested on [ExpressionEngine 1.6.1](#).

LG File Manager also requires [Moxiecode File Manager PHP](#)

Collaborative publishing for *ExpressionEngine*

Improve your workflow with drafts, revisions, notes, and member-based privileges.

ANOTHER **NEWISM** CREATION

Installation

The LG File Manager extension contains an extension folder and a language file. To install the extension follow the instructions below:

1. [Download the latest version of the extension](#)
2. Extract the .zip file to your desktop
3. Copy the `extensions/ext.lg_file_manager.php` directory to your `/system/extensions` directory
4. Copy the `language/english/lang.lg_file_manager.php` file to your `/system/languages/english` directory

LG File Manager does **not** include a copy of Moxiecode File Manager or TinyMCE. It will need to be purchased/downloaded from the [developer](#).

Activation

This extension has no special activation requirements. To activate:

1. Log in to your sites administration
2. Open the [Extensions Manager](#)
3. **Enable Extensions** if not already enabled
4. **Enable** the extension
5. Configure the extension settings

Configuration

The LG File Manager extension includes only one setting.

1. [Script Folder Path](#)

Script Folder Path [required]

```
/scripts/tiny_mce/jscripts/tiny_mce/plugins/filemanager/js/
```

By default LG File Manager assumes the location of `mfilemanager.js` is `/scripts/tiny_mce/jscripts/tiny_mce/plugins/filemanager/js/`.

If you are using Moxiecode File Manager as a standalone file browser you may need to change this path.

Configuration options for Moxiecode File Manager can be found in the [developers documentation](#).

Usage

Now that the extension has been installed and setup correctly a new field type will appear when creating custom fields.

1. [Create a new custom field](#) in an existing weblog and choose LG File Manager as the field type.
2. Create a new entry in the weblog
3. Click the icon next to the new custom field which will launch the Moxiecode File Manager
4. Browse and insert the file required
5. The path to the file will be inserted into the text input on the publish/edit form

Change Log

1.2.0

- Code cleanup
- Source code documentation
- Small bug fixes
- Added Slovak language file
