Updgrading from LG Social Bookmarks v1?

LG Social Bookmarks 2.0 is a complete rewrite from LG Social Bookmarks v1 and is not compatible. Version 1 was an ExpressionEngine module while version 2.0 is an ExpressionEngine extension.

To upgrade first backup your database and site then put your site offline. Disable the LG Social Bookmarks version 1.0 module and delete all files associated with the module.

After installing and activating the version 2.0 extension the only other change you will need to make is a small update to the LG Social Bookmarks tag. Put your site online and you are hot to trot.

Features

LG Social Bookmarks 2.0 is a Multi-Site Manager compatible ExpressionEngine extension that inserts popular social bookmarking links to any weblog post.

- Allows content authors to add social bookmarking links (Digg, Del.icio.us) to any weblog entry
- Set default social site submission links in your EE administration
- Override listed sites on a per tag basis
- Fully customisable html output
- Easily add your own site to the default set

Never miss an update again! LG Social Bookmarks plays well with LG Addon Updater which is a recommended

download.

Extension
Configuration

LG Social Bookmarks
in the wild

Requirements

LG Social Bookmarks is an [ExpressionEngine extension](#) and has been tested on [Expression Engine 1.6.1+](#).

This extensions administration also requires jQuery 1.2.6+.

Installation

The LG Social Bookmarks extension contains a extension folder, language file and some administration images.

To install the module follow the instructions below:

1. [Download the latest version of the extension](#)
2. Extract the .zip file to your desktop
3. Copy the `extensions/ext.lg_social_bookmarks_ext.php` file to your `/system/extensions` directory
4. Copy the `extensions/lg_social_bookmarks_ext` directory to your `/system/extensions` directory
5. Copy the `language/english/lang.social_bookmarks_ext.php` file to your `/system/languages/english` directory
6. Copy the `themes/cp_global_images/lg_social_bookmarks` directory to your `/themes/cp_global_images` directory
7. Open the [Extension Manager](#)
8. Enable Extensions if not already enabled
9. Enable the extension
10. Configure the extension settings

Configuration

The LG Social Bookmarks extension includes an simple administration to set the default list of sites that will be outputted.

The following extension settings are available:

- [Enable](#)
- [Social Bookmarks](#)
- [Scripts](#)
- [Check for updates](#)

Enable [required]

```
Yes|No
```

Enable LG Social Bookmarks for this site?

Social Bookmarks [required]

Which social bookmarking sites would you like to show by default?

To configure the default list of sites displayed follow the steps below:

1. Open the Social Bookmarks extension settings
2. To activate a site click on the corresponding grey button
3. To de-activate a site click on the corresponding green button
4. Confirm the change to the active sites by pressing the 'Update social bookmarks button'

Scripts

```
http://ajax.googleapis.com/ajax/libs/jquery/1.2.6/jquery.min.js
```

LG Twitter requires jQuery Core v1.2.6+ to work correctly.

Check for updates?

LG Social Bookmarks can call home and check for recent extension updates. **This feature requires LG Addon Updater**.

Displaying social bookmarking links in your weblog entries

Displaying social bookmarking links in your weblog entries is as easy as adding a {lg_social_bookmarks} tag pair inside the {exp:weblog:entries} loop. A complete example of the {lg_social_bookmarks} tag can be seen below

```
{exp:weblog:entries weblog="news"}
  {lg_social_bookmarks title="{title}" permalink="{path=template_group/comments}"}
    <p>Enjoy this post? Share it with others.</p>
    <ul>
      {social_sites}
        <li>
          <a href="{social_site_url}" title="Bookmark on: {social_site_name}">
            <img src="/themes/cp_global_images/lg_social_bookmarks/favicons/{social_site_img_url}" a
            <span>Bookmark on {social_site_name}</span>
          </a>
        </li>
      {/social_sites}
    </ul>
  {/lg_social_bookmarks}
{/exp:weblog:entries}
```

Tag Reference

LG Social Bookmarks tag {lg_social_bookmarks}

The {lg_social_bookmarks} tag pair is the only tag pair used to show the sites you select in your administration Social Bookmarks page.

The {lg_social_bookmarks} can be used to render both the default active set of links selected in your sites administration or a custom set of sites on a per template basis.

If you are upgrading from the LG Social Bookmarks v1 just remove the `exp:` prefix in the `{lg_social_bookmarks}` tag.

Parameters

- title=
- permlink=
- sites=

title= [optional]

```
title="{title}"
```

The title of of your weblog entry.

permalink= [required]

```
permalink="{path=template_group/template}"
```

The permalink to your weblog entry which must contain the full url.

sites= [optional]

```
sites="Digg|del.icio.us|Blinklist"
```

The default list of sites you have chosen on the Social Bookmarks administration page can be over ridden with a custom set of social bookmarking sites using the sites parameter. The parameter accepts a pipe 'l' delimited list of the supported social bookmarking sites.

The supported list of social bookmarking sites include:

ASK	BarraPunto	blinkbits
BlinkList	BlogMemes	BlogMemes Fr
BlogMemes Sp	BlogMemes Cn	BlogMemes Jp
blogmarks	Blogosphere News	Blogsvine
blogtercimlap	Blue Dot	Book.mark.hu
Bumpzee	co.mments	connotea
del.icio.us	De.lirio.us	Diigo
Design Float	Digg	DotNetKicks
DZone	eKudos	Email
Facebook	Fark	feedmelinks
Furl	Fleck	Global Grind
Google	Gwar	Haohao
HealthRanker	Hemidemi	IndiaGram
IndianPad	Internetmedia	kick.ie
Kirtsy	laaik.it	LinkArena
LinkaGoGo	LinkedIn	Linkter
Live	Ma.gnolia	Meneame
MisterWong	MisterWong.DE	Mixx
muti	MyShare	N4G
Netscape	NewsVine	Netvouz
NuJIJ	PlugIM	PopCurrent
Pownce	ppnow	Print
Propeller	Ratimarks	RawSugar
Rec6	Reddit	SalesMarks
Scoopeo	scuttle	Segnalo

Shadows	Simpy	Shoutwire
Slashdot	Smarking	Socialogs
Spurl	SphereIt	Sphinn
Squidoo	StumbleUpon	Taggly
Technorati	TailRank	ThisNext
TwitThis	Upnews	Webnews.de
Webride	Wikio	Wikio FR
Wikio IT	Wykop	Xerpi
YahooMyWeb	Yigg	

Variable Pairs

{social_sites} ... {/social_sites} [required]

```
{exp:weblog:entries weblog="news"}
  {lg_social_bookmarks title="{title}" permalink="{path=template_group/comments}"}
    <p>Enjoy this post? Share it with others.</p>
    <ul>
      {social_sites}
      <li>
        <a href="{social_site_url}" title="Bookmark on: {social_site_name}">
          <img src="/themes/cp_global_images/lg_social_bookmarks/favicons/{social_site_img_url}" alt
          <span>Bookmark on {social_site_name}</span>
        </a>
      </li>
      {/social_sites}
    </ul>
  {/lg_social_bookmarks}
{/exp:weblog:entries}
```

The {lg_social_bookmarks} tag contains one variable pair, {social_sites}. The {social_sites} variable pair loops through all your chosen sites and outputs html code replacing the following nested single variables.

Single Variables

{social_site_name} [nested in {social_sites}]

Replaced with a human readable version of the social bookmarking sites name.

{social_site_url} [nested in {social_sites}]

Replaced with the url for the social bookmarking site including passed parameters.

{social_site_img_url} [nested in {social_sites}]

Replaced with the filename of the corresponding site favicon **without** a directory path. Favicons for all supported sites are provided in the themes/cp_global_images/social_bookmarks directory in the .zip download.

{social_site_count} [nested in {social_sites}]

The current number of the element being shown, ie the first bookmark would have the count 1.

Conditionals

All the single variables above can be used in conditional tags.

Change Log

2.0.2

- Fixed issue when using {path} tag inside permalink attribute

2.0.1

- Fixed image path issue
- Added error message if permalink attribute is not included

2.0.0
